

Portfolio 4: Iteration

Simple Quiz Game

Description

This program is a simple quiz game that asks the user multiple questions. The program checks if the answer is correct, counts the score, and displays the final result.

Concepts Used

- Variables
- Input and Output
- Conditionals
- Functions
- Iteration (Loops)

Created by:

Tresha Mae Madrid

```
In [7]: # Function to check answers

def check_answer(user_answer, correct_answer):

    if user_answer.lower() == correct_answer.lower():
        return True

    else:
        return False

In [8]: # Questions and answers

questions = [
    "What programming language are we using?",
    "What symbol is used for comments in Python?",
    "What function is used to display output in Python?",
    "What keyword is used to create a function in Python?"
]

answers = [
    "Python",
    "#",
    "print",
    "def"
]
```

```
In [9]: # Score variable

score = 0

# Loop through questions

for i in range(len(questions)):

    print("\nQuestion", i + 1)
    print(questions[i])

    user_answer = input("Your answer: ")

    # Check answer
    if check_answer(user_answer, answers[i]):

        print("Correct!")
        score += 1

    else:

        print("Wrong!")
        print("Correct answer:", answers[i])
```

Question 1

What programming language are we using?

Correct!

Question 2

What symbol is used for comments in Python?

Correct!

Question 3

What function is used to display output in Python?

Correct!

Question 4

What keyword is used to create a function in Python?

Correct!

```
In [19]: # Display final score

print("QUIZ RESULT")
print("Your Score:", score, "/", len(questions))

# Remarks

if score == 4:

    print("Excellent!")

elif score >= 3:

    print("Good job!")

else:
```

```
print("Keep practicing!")
```

QUIZ RESULT

Your Score: 4 / 4

Excellent!
